PSU8600 & ETHERNET/IP

Did you know PSU8600 now has EtherNet/IP?

The SITOP PSU8600 power supply system offers full integration into automation systems – now via EtherNet/IP (Industrial Protocol). Operational data is recorded and can therefore provide diagnostic and maintenance information. With its unique functionality and communication capability, the SITOP PSU8600 power supply system is an ideal entry point into the digital enterprise.

Expanded Usability

1. With EtherNet/IP output voltage of each output can be changed by means of a program to permit the variable supply of loads, e.g. fans.
2. Early detection of dynamic, continuous, or increasingly recurring overload states with the aid of momentary current values.
3. Status message of outputs (on, off, overload)
4. Outputs can be freely parameterized for messages regarding preventive maintenance and output monitoring.
5. Detection and logging of short-term power failures to analyze the network quality.
6. Acquisition of the energy data (current, voltage) of each output to determine possible energy savings.
7. Pre-alarm for system overload and overtemperature

Quick and easy integration into the automation system

1. Comprehensive data exchange through PROFINET and OPC UA or EtherNet/IP
2. Integration in TIA Portal, SIMATIC PCS 7, WINCC or Rockwell Automation Studio 5000
3. Parameterization and diagnostics via SITOP Manager
